About PwC	67

Foreword

Welcome to the first edition of PwC's survey on Strategic and Emerging Issues in the Medical Scheme Industry. Our team of industry specialists is proud to present their work and we are convinced that the contents provide a comprehensive overview of the issues and challenges facing the industry today.

Looking ahead, the medical scheme industry can expect many challenges following the introduction of National Health Insurance (NHI), the demarcation between health insurance and medical scheme cover, and the constantly evolving regulatory environment. New member growth prospects and the sustainability of existing membership continue to be impeded by reduced consumer discretionary income and an increase in medical costs. The medical scheme industry in Southern Africa faces unique challenges and it is important that it evaluates and adapts to the needs of the emerging market.

We believe this survey will facilitate identification of issues and trends in order to allow Trustees to proactively plan to meet the challenges they face. The survey covers 53% of the industry in South Africa, based on principal members at 31 December 2010. We have identified the major trends, emerging issues and differences in opinions, which I believe you will find useful to benchmark and evaluate your scheme against.

The key objectives of this survey are to:

- Raise the awareness of medical schemes to emerging trends and issues in the Southern African medical scheme industry;
- Establish industry trends;
- Understand the strategic thinking of principal officers in the industry; and
- Provide insight into how the medical scheme industry might evolve over the next three years.

Key themes of this survey include:

- Scheme performance;
- NHI;
- · Regulation; and
- · Solvency and risk management.

I would like to thank the principal officers and executives who participated in the survey. We greatly appreciate the openness, insight and vision you have provided on key topics.

I trust that you will find this survey thought-provoking and insightful. If you would like to discuss any of the issues addressed in more detail, please speak to one of your contacts at PwC or those listed at the end of the survey.

Your feedback on the content of this survey would also be appreciated, as this will help us to ensure that we are addressing the issues on which you are most focussed.

Ilse French

Medical Scheme's Leader – Southern Africa 2 July 2012

Executive summary

Background

This inaugural survey focuses on strategic and emerging issues in the Southern African medical scheme industry and is first of its kind. While the survey aims to provide an industry-wide perspective, where meaningful, it also reports on the differences between restricted and open medical scheme participants.

The survey is based on the results of an online questionnaire completed by respondents. The questionnaire was completed anonymously by principal officers of 20 schemes registered in South Africa and one from Namibia. This represents 53% of the South African industry, based on principal membership of 1 882 755 at 31 December 2010. The Namibian respondent represents 29% of the industry in that country, based on principal membership of 18 772 on 31 December 2010. The questionnaire took approximately one hour to complete and the survey was completed between February and April 2012.

Participant profile

The information provided has been considered proprietary and remains confidential.

The profiles of the 20 South African schemes that completed the survey are included below:

	Respondents	Total industry	Representation
Average principal members	1 882 755	3 582 008	53%
Gross contributions (R'000)	R51 698 112	R96 481 617	54%
Gross relevant healthcare expenditure (R'000)	R44 351 888	R84 912 234	52%

 $Source: Council for {\it Medical Schemes Annual Report 2010/2011}$

The profile of the Namibian scheme that completed the survey is included below:

	Respondent	Total industry	Representation
Average principal members	18 772	64 546	29%
Net contributions (N\$'000)	N\$378 078	N\$1 533 121	25%
Healthcare expenditure (N\$'000)	N\$302 395	N\$1 283 065	24%

Figure 1: Open or restricted scheme participation

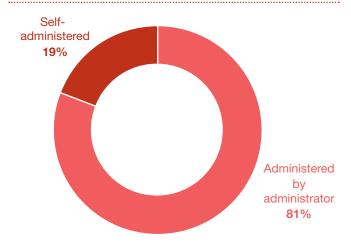

Base: 21 respondents

Figure 2: Headquarter location

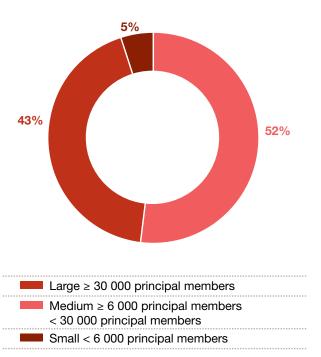

Base: 21 respondents

Figure 3: Management model

Base: 21 respondents

Figure 4: Scheme size

Base: 21 respondents

Percentages quoted in this report are based on the number of respondents as a proportion of the total respondents of 21, or as otherwise indicated in cases where the question applies only to medical schemes in South Africa.

Survey at a glance

Scheme performance

- 71% of schemes had contribution rate increases of between 5% and 10% for 2012, with hospital and specialist costs driving these increases.
- Rising costs are managed by managed healthcare interventions, risk transfer arrangements and clinical risk management programmes.
- 90% of schemes think wellness programmes, disease and lifestyle management will reduce costs for the schemes.
- 57% of schemes said that an investigation by the Competition Commission into healthcare costs could be useful.
- 95% of respondents were of the view that Prescribed Minimum Benefits (PMBs) paid in full result in excessive benefits being paid by medical schemes.
- 76% of schemes do not believe that medical scheme trustees are over-compensated.

• 60% of schemes believe that the current two-tier healthcare system is sustainable.

- All schemes are of the view that the provision of healthcare in South Africa is deteriorating.
- 55% of schemes do not think that the introduction of NHI will change the current state of health in South Africa.

• 65% of schemes believe that the medical insurance needs of members will differ in 2015.

• Increased access to healthcare and improved service delivery to the previously disadvantaged are some of the benefits schemes believe will result from the introduction of NHI.

- 60% of schemes believe NHI will result in more growth opportunities for the medical scheme industry.
- Retaining membership and affordability of cover are the key challenges the medical scheme industry will be faced with following the introduction of NHI.

Informationtechnology (IT)

National Health

Insurance (NHI)

- Managing data and data quality was identified by the schemes as the major technology weaknesses within the industry.
- Improved operational efficiency is considered the key benefit of investment in IT.
- Almost half of the schemes have considered the role of e-health in reducing costs and improving accessibility.

- 70% of schemes expect the intensity of regulation of medical schemes to increase substantially over the next three years.
- The majority of schemes are of the view that the investment limits to which schemes have to adhere have an adverse impact on investment returns
- 75% of medical schemes will see a decrease in solvency margins if personal member savings accounts are removed from the financial statements of the scheme.
- 80% of schemes have considered the impact of the Consumer Protection
- The majority of schemes are concerned about the burden of regulation and believe the costs of regulation are detrimental to members' interests.
- 81% of schemes believe that the current solvency margin calculation is inappropriate and support a more risk-based solvency approach.
- 62% of schemes are not in favour of the new international insurance contract accounting standard (IFRS 4 Phase II).
- The most important risks ranked by the schemes were membership movements, an aging risk profile and unhealthy members.
- Top-ranked risk challenges include member attitudes towards medical cover and compliance and regulatory requirements.
- Increased cost efficiency and bargaining power in tariff negotiation are some of the advantages of recent mergers in the medical scheme industry.
- Economies of scale are seen as the major driver of change in the medical scheme industry today.
- Healthcare costs were regarded as the most pressing issue.

Regulation

Solvency and risk management

Market environment

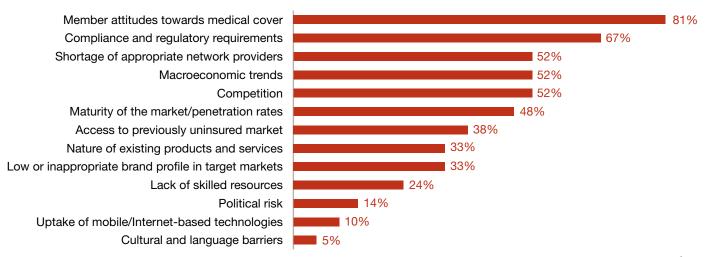

Scheme performance

The last few months have seen the media spotlight focused on increases in medical scheme contribution rates and rising medical costs. There is no price regulation to guide the tariffs charged by service providers and schemes are of the opinion that this is to the schemes' detriment.

Q: What do you regard as the principal challenges that your scheme will face over the coming year in your key growth markets?

Figure 5: Principal challenges facing medical schemes

Base: 21 respondents

Only about 15% of the South African population has medical scheme cover and the lower-income market is likely to be a key growth market for most medical schemes.

Over 80% of schemes included member attitudes towards medical cover as a challenge in key growth markets. This may indicate that the target market may not realise the need for cover or not be willing to purchase cover and forgo alternate spending. This could also refer to the abuse of cover by members.

Compliance and regulatory requirements were also recognised as a significant challenge. One of these requirements is for all options to provide cover for PMBs. This requirement creates a barrier to entry as there is a minimum contribution schemes need to charge in order to provide PMBs. Individuals that cannot afford this are therefore unable to afford any cover.

A shortage of appropriate network providers was seen as a key challenge in growth markets.

Contracting with network providers allows medical schemes to provide benefits in a more cost-effective way as rates and contracts can be negotiated with these providers due to the increased volumes. Contracting with these providers is therefore a key tool in providing cover to the lower-income market.

Other challenges identified include macroeconomic trends, competition and maturity of the market/penetration rates.

Important changes facing the medical scheme industry

Q: In your opinion, what are the most important changes/ developments taking place in the medical scheme industry at present? Common changes and developments listed by schemes include:

- The establishment of NHI;
- The cost of providing PMBs;
- Increasing healthcare costs;
- Balancing affordability of cover

for members with comprehensive benefits; and

Over-regulation and regulatory compliance.

Most of the issues noted above are discussed in more detail in the sections on NHI, solvency and risk management, and regulation.

Q: Identify the three major strengths and three major weaknesses of the Southern African medical scheme industry at present?

Strengths Weaknesses

Private healthcare services and managed care

The high quality of care provided by service providers in the private sector was identified as a major strength. The private sector in South Africa is highly developed.

The benefits of this to schemes include higher member satisfaction and lower future cost of claims in cases where adequate care is provided.

Managed care was also included in the list of strengths. Managed care arrangements, when used effectively, can assist schemes in providing quality care in a cost-effective way.

Affordability of contributions and high increases in the cost of medical care

Medical inflation in South Africa is in excess of consumer price inflation. Reasons for this include a shortage of medical practitioners/specialists. Scheme contribution rates therefore have to increase at an unsustainable rate

The requirement to include PMBs in all benefit options creates a barrier to entry in that it is difficult for schemes to offer more affordable lower-cost options.

Systems

Some schemes listed the systems of schemes (IT, administration and other) as a strength.

This indicates that schemes have dedicated substantial resources to developing adequate systems. The benefits of this include faster claims processing and better quality data for pricing, monitoring and risk management.

Over-regulation

Excessive regulation and regulatory intervention were cited by many participants as a weakness for the schemes.

The cost of compliance as well as the restrictions enforced by regulations reduce the medical schemes' ability to manage the affordability of contributions.

Good governance

Good governance was identified as a strength in the industry.

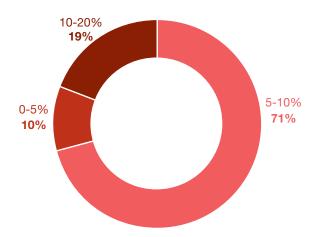

Good governance results in members' best interests being considered in all areas. It also results in the efficient management and operation of schemes.

Lack of national tariff list

There is currently no national tariff list used by all schemes.

Each scheme therefore compiles its own list of scheme tariffs. This lack of consistency results in providers charging different rates and results in a lack of transparency in healthcare costs. Q: What was the overall increase in contribution rates in your scheme for 2012?

Figure 6: Increases in contribution rates

Base: 21 respondents

Fifteen out of the 21 schemes had 2012 contribution increases in the 5-10% range.

Only two schemes had an increase of less than 5%, while the remaining four implemented increases in excess of 10%.

Q: What is your estimate of the annual growth in contribution rates (%) in your scheme for 2012 and per year over the next three years?

On average, the schemes estimate that their contribution rate increase will remain stable at around 8.8% for the next three years. From the 21 responses received, the average increase for open schemes was 9.1% and 7.8% for restricted schemes. This is consistent with the increase in contribution rates for 2012, as the majority of increases were between 5% and 10%.

The stable rate of increase reflects the perceived stability in the rate of medical inflation as well as regulatory and competitive pressures to keep the contribution rates as low as possible.

The challenge to attract new and lower-income members to schemes also contributes to stable levels of annual increases.

Since the average rate of increase is above both the projected price and projected salary inflation, it is unlikely that this rate of increase will be sustainable in the future. As medical scheme contributions make up an increasingly higher proportion of individuals' incomes, the affordability of medical cover decreases. This may result in a 'buy-down' in respect of medical cover and healthcare costs will need to be managed more efficiently in order to avoid this.

Q: What was the most significant factor that contributed to the contribution rate increase?

More than two-thirds of respondents attributed the increase in contribution rates to increases in hospital and specialist costs. Only three schemes cited changes in membership profiles and the ageing demographics of the schemes' membership as reasons for the increase in contributions.

Q: How did your scheme manage the rising costs, specifically the impact on contribution rates and benefits? Most schemes revisited their cost structures. Some of the revisions include the following initiatives:

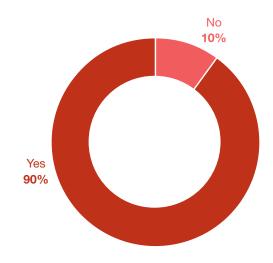

- Managed healthcare interventions (29%);
- Negotiated more favourable terms with major service providers (24%);
- More rigorous claim assessment to identify fraudulent claims (10%);
- Risk transfer arrangements (10%);

- Clinical risk management programmes (10%); and
- Actuarial analysis of benefits provided and restructuring of these benefits (10%).

Three schemes utilised income on investments to subsidise risings costs, while one scheme was addressing spend on non-healthcare costs.

Q: Do you think that making wellness programmes, disease and lifestyle management part of your product offering will reduce costs for your medical scheme?

Figure 7: Potential of wellness management programmes to reduce costs

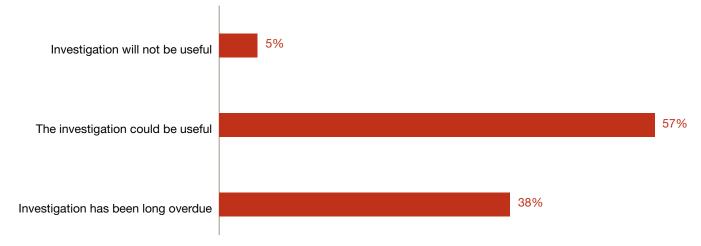

Base: 21 respondents

Ninety percent of schemes believe that wellness programmes as well as disease and lifestyle management initiatives will reduce costs for schemes. With the technology available today, schemes can use interoperable devices, real-time integrated data and embedded intelligence within an engaged social community to support patient behavioural change and improve outcomes. Preventive services such as physicals, health-risk assessments, biometric screenings and management of chronic conditions can contribute to a reduction in costs for schemes.

Q: The Competition Commission recently announced that it was considering an investigation into healthcare costs. Would such an investigation be overdue or not?

Figure 8: Competition Commission investigation of healthcare costs

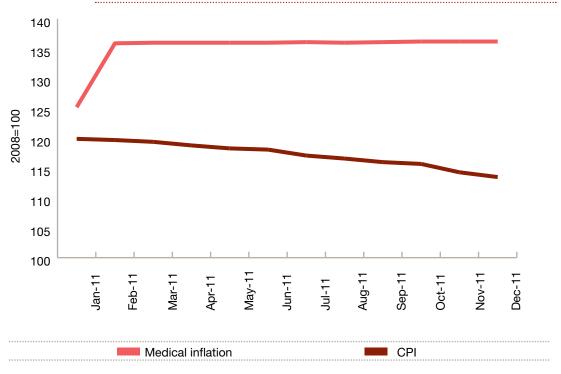

Base: 21 respondents

Fifty-seven percent of schemes are of the opinion that an investigation could be useful, while 38% believe that such an investigation is long overdue. Currently there is no healthcare cost pricing regulation that regulates provider pricing. Members and schemes are therefore not protected by a regulated set of tariffs. As a result of this, members and schemes are exposed to high provider prices.

This should be seen against the bakdrop that many schemes also feel that excessive tariffs are often charged.

As the graph below illustrates, there are significant variances between consumer price inflation (CPI) and medical CPI. Members often receive only CPI-linked salary increases, which in turn puts pressure on schemes to keep increases as low as possible.

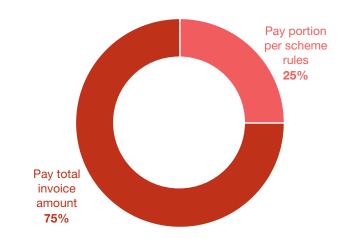

Figure 9: CPI vs Medical inflation

Source: Statistic South Africa

Q: In respect of PMBs, does your scheme pay the full invoice amount for the PMB treatment or the amount per the approved scheme rules?

Figure 10: Payment level for PMB treatment

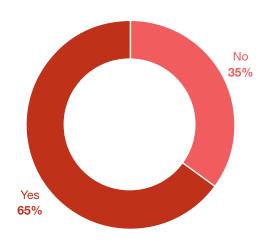

Base: 20 South African respondents

A disagreement has arisen in the medical scheme industry since the Council for Medical Schemes (CMS) enforces its interpretation that 'pay in full' in terms of Regulation 8: Prescribed Minimum Benefits, means

payment in full to the healthcare service provider on invoice and not payment in full in terms of the rates of the benefits of the rules of the individual scheme.

Q: In respect of the payment of PMBs, has your scheme obtained an opinion on what the term 'pay in full' means per Regulation 8 of the Medical Schemes Act?

Figure 11: Legal advice regarding what 'pay in full' means

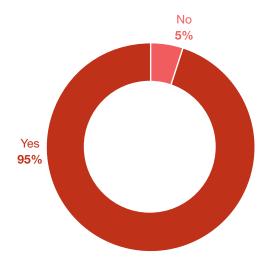

Base: 20 South African respondents

Thirteen out of the 20 South African schemes have obtained legal advice on what the term 'pay in full' means.

Q: In your view, does paying in full for PMBs expose the scheme to paying excessive benefits to the detriment of the members?

Figure 12: Financial exposure due to 'pay in full'

Base: 20 South African respondents

The NHI package of services and the Prescribed Minimum Benefits (PMBs) will be very much aligned and this will help members to make a seamless transition from medical schemes to NHI.

Humphrey Zokufa, Chief Executive of the Board of Healthcare Funders of South Africa Only one scheme said that PMBs do not expose their scheme to paying excessive benefits, as the scheme has entered into provider network contracts.

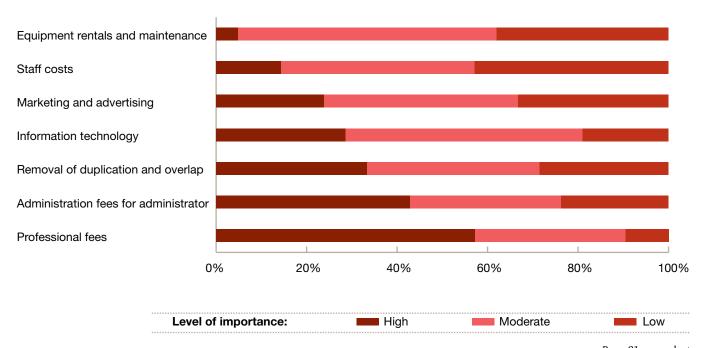

Strong views were presented by the schemes that answered 'Yes', as they believe that schemes are exploited by excessive tariffs charged by service providers.

Some of the schemes have observed an increase in provider tariffs since the communication by the Registrar of Medical Schemes regarding PMBs. They say claim tariffs submitted are in excess of scheme tariffs and that service providers exploit the lack of price control by ratcheting up costs, knowing that the schemes are obliged to pay.

Schemes say that the lack of price regulation is to the detriment of their members. As there is no control over what a provider can charge, members' benefits are at risk due to the unwarranted, uncontrolled expenditure which they believe often borders on unethical, unscrupulous behaviour.

Q: In consideration of the healthcare industry, where do you believe the greatest focus will be on cost management for the next three years? Please rank them in importance from 1 to 7 (1 = high; 7 = low).

Figure 13: Short-term cost management priorities

Base: 21 respondents

Figure 13 shows a mixed ranking of cost management priorities in the next three years, with the three top ranking considerations being:

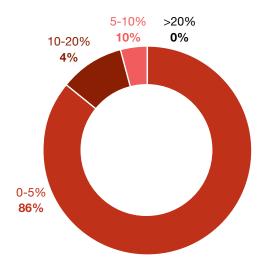

- Professional fees;
- Administration fees for administrator; and
- · Removal of duplication and overlap.

The removal of duplication and overlap is a primary focus area. This is in line with the latest PwC Health Research Institute Consumer Survey (HRI survey) in which respondents identified data-related issues most important: filling out information multiple times, difficulty accessing health record information and repeating tests because information is not available and timely.

These inefficiencies provide opportunities to improve the medical administration system and capitalise on the savings.

Q: By what percentage do you perceive you can reduce current operating costs (non-healthcare costs), if at all?

Figure 14: Potential to reduce current operating costs

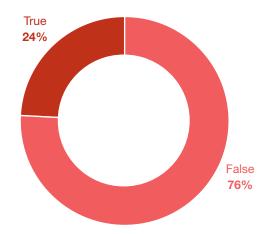

Base: 21 respondents

Eighteen schemes (86%) believe that cost savings of up to 5% can be achieved, while only three were of the opinion that they could cut operating costs by more than 5%. Ninety percent of open schemes were of the opinion that savings of up to 5% can be achieved while only 80% of restricted schemes shared that view.

In PwC's South African Insurance survey, released in June 2012, 48% of insurance companies were of the opinion that costs could be reduced by up to 5%. In contrast to this survey, 86% of medical schemes could reduce costs by up to 5%.

Q: A recent newspaper headline read 'Medical schemes trustees coining it'. Do you believe this statement to be true?

Figure 15: Remuneration of trustees

Base: 21 respondents

Medical schemes trustees coining it

Ten non-profit medical schemes in South Africa spent a total of more than R28m on salaries for trustees in 2010. The head of compliance and investigations at the Council for Medical Schemes (CMS), Stephen Mmatli, said payments to trustees had increased over the years in a 'concerning' trend. "The whole argument is that the bulk of your costs must go to healthcare, not lining your pockets." He told the newspaper that trustee remuneration was meant to be a stipend rather than a salary. Trustees' salaries were contributing to rising costs of medical aids. Being a trustee was 'now seen as a career', even though the duties of the position meant short meetings four times a year, he said. A recent CMS report revealed that the council wished to replace the entire board of two medical schemes who over-inflated trustees salaries, among other things.

The Times, 7/9/2011. 'Medical schemes trustees coining it'.http://www.fin24.com/Companies/ Health/Medical-schemes-trustees-coining-it-20110907 A quarter of schemes believe that medical scheme trustees are 'coining it' and that certain schemes are overcompensating their trustees.

Three-quarters of schemes are of the view that schemes are highly regulated and that trustees have a fiduciary duty towards the governance of the scheme and should be remunerated for services rendered.

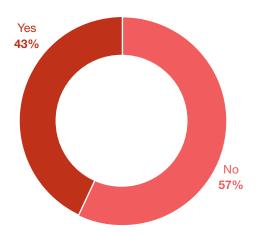

Seventy three percent of open schemes believed the above statement to be false and trustees are not over compensated whilst 80% of restricted schemes shared this view. Four of the schemes that participated in the survey did not pay any remuneration to their trustees.

Two schemes observed that trustees face significant risks and current remuneration is not sufficient for the risks that they are taking.

One respondent questioned the 50% member representation requirement and whether the members were best suited for the position.

Q: Do you think that medical schemes should be intermediated?

Figure 16: Use of intermediaries

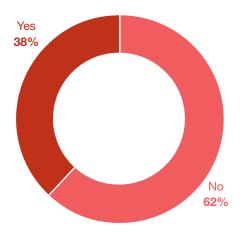

Base: 21 respondents

Twelve schemes (57%) believe that schemes should not be intermediated. Sixty-four percent of the open schemes were of the opinion that schemes should be intermediated.

Ten schemes did not make use of intermediaries, while the remaining 11 made use of the services of 15 062 brokers.

Q: Do you think that the cost of intermediation justifies the benefit to the member?

Figure 17: Value of intermediaries

Base: 21 respondents

Thirty-eight percent of schemes think that the cost of intermediation is justified by the benefit to the member of having expert guidance when choosing benefit options.

Thirty-eight percent of schemes think that the cost of intermediation is justified by the benefit to the member of having expert guidance when choosing benefit options. Since out-of-pocket expense risk could financially ruin a family, it is crucial that the appropriate benefit option be chosen to meet both their financial and healthcare needs. At the same time, they believe that brokers should have sufficient knowledge to explain important aspects of benefit options such as designated service provider networks and PMBs.

The 62% of schemes that were of the view that intermediation costs were not justified indicated that brokers did not provide the best advice and service to members.

National health insurance

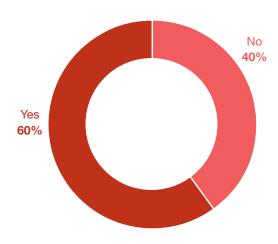

NHI is a financing system that aims to ensure all citizens of South Africa (and legal long-term residents) are provided with essential healthcare, regardless of their employment status and ability to make a direct monetary contribution to the NHI fund.

Q: Do you believe that the current two-tier healthcare system (private and public) is

sustainable?

Figure 18: Sustainability of the current healthcare system

Base: 20 South African respondents

Today, discrimination has been cleared and abolished by the constitution. Unfortunately, we discover that we still have two healthcare systems, which, this time, are no longer defined by law. It is not written anywhere, it is not allowed by the constitution, but it is there, and it exists... Whether you belong to one or the other is no longer determined by your colour, but by how much money you have in your pockets.

> Dr Aaron Motsoaledi, National Minister of Health

There is no country in the world where healthcare is financed entirely by government. While the provision of healthcare is widely recognised as the responsibility of government, private capital and expertise are increasingly viewed as welcome sources to bring about efficiency and innovation.

What is less clear, however, is the appropriate balance of public to private resources in financing and managing healthcare. Debates on this topic include discussions about various structures that ensure the best possible return for both taxpayers and the private sector. One such structure is a public-private partnership (PPP).

Governments are increasingly looking to this model to solve larger problems in care delivery and wellness. As PPPs move from replacing crumbling inpatient structures to managing care delivery, the impact on overall costs is far more substantive and sustainable.

However, wrestling down the rapid pace of medical cost increases adds a higher level of difficulty and complexity. But PPPs can evolve to bend the cost curve.

Across the globe, these partnerships are being designed to make the government and private industry more accountable for maintaining each nation's most precious national resource: the health of its citizens.

Sixty percent of respondents are of the view that the current healthcare system is sustainable. Six schemes believe the NHI should play a vital role in providing sustainable healthcare to all South Africans and that there should be one integrated healthcare system.

Four schemes suggested that the two-tier system has been successful in many other countries and private healthcare is a choice people make. However, five schemes said that the public healthcare system is in distress because of overcrowding and strain in the public sector. They argued that an overhaul is urgently needed to provide effective healthcare to all South Africans.

Q: In your view, is the state of provision of healthcare in South Africa deteriorating?

All respondents answered 'Yes' to this question.

Asked if they think the introduction of NHI will change the current state of health in South Africa, 55% were of the opinion that the introduction of NHI will not change the current state of health. Their explanations for taking this view include:

- The Government has an obligation to provide healthcare and it currently does, however, not at the standard required, which is a managerial problem;
- Management of facilities, maintenance and appropriate budget monitoring and spending should be addressed prior to the introduction of NHI;
- NHI alone is not the solution, as working conditions need to be improved, primary care has to be revived, pharmaceutical distribution for state-owned facilities should be decentralised and a booking system should be introduced; and

 A total overhaul of basic resources should take place before NHI is introduced.

Fifteen percent of schemes said that NHI may change the current state of healthcare if proper management is introduced together with a concerted effort from government to eliminate waste and inefficiencies, and introduce the required skills and expertise to run the NHI system efficiently.

A quarter of the schemes agreed that the introduction of the NHI will change the current state of healthcare if it is implemented in accordance with the focus contained in the Green Paper.

Q: In your view, how will the medical insurance needs of the members of 2015 differ from those of today?

Thirty-five percent of schemes were of the view that members will move away from comprehensive cover to more essential hospital and specialist cover.

More than a third said that the insurance needs of members would not change between now and 2015.

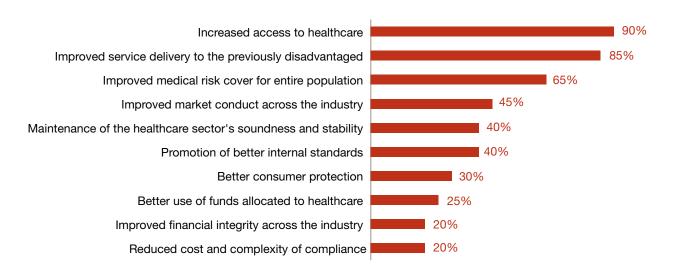

One in five schemes expect an increase in lifestyle chronic diseases, burden of disease, ageing population and obesity, which will result in higher medical costs.

One respondent suggested that if NHI is introduced, specific private system insurance will be necessary and should be introduced.

Another scheme recognises an opportunity to expand on current medical insurance products, as those citizens that can afford medical insurance products will have a need for more comprehensive cover and quality of care that the NHI might not be able to provide.

Q: Do you believe the NHI system will result in the following benefits for the healthcare industry?

Figure 19: Benefits of NHI

Base: 20 South African respondents

Figure 19 above records that the majority of participants believe that NHI will have the following benefits:

- Increased access to healthcare;
- Improved service delivery to the previously disadvantaged; and
- Improved medical risk cover for the entire population.

However, respondents did not believe that NHI will:

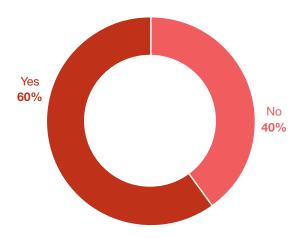

- Reduce the cost and complexity of compliance;
- Improve financial integrity across the industry;
- Result in better use of funds allocated to healthcare; or
- · Lead to better consumer protection.

We must live in hope and action towards the delivery of sustainable healthcare for all.

Survey respondent

Q: Do you believe the NHI system will result in more growth and business opportunities for the medical scheme industry?

Figure 20: Opportunities from NHI

Base: 20 South African respondents

Even with a fully-developed NHI, there will still be supplementary health insurance products that will have to be regulated.

Dr Monwabisi Gantsho, Registrar of the Council for Medical Schemes Respondents who answered 'Yes' to this question were then asked how they believe the opportunities opened up by NHI could be realised by the medical scheme industry.

There were a number of divergent responses and no common theme could be identified. These included:

- An increase in the use of private health insurance;
- Schemes should be working more closely with employer groups to provide quicker access to healthcare for employees;
- More innovative insurance products to retain and grow the private healthcare market; and
- Volume benefits as a greater portion of the population will be covered.

Q: What will the main impact on your product offering be with the implementation of NHI?

Impact	Responses
More innovative product offerings	9 of the schemes were of the view that benefit offerings would change as there will be a greater focus on more advanced care and services
Changes to product offerings	6 of the schemes were of the view that benefits might be reduced
No impact	3 of the schemes were of the view that there will be no change in product offerings
Insufficient information	2 of the schemes were of the view that there is not sufficient information on NHI to assess the impact on product offerings

Q: In your view, what will be the key challenges for the medical scheme industry following the introduction of the NHI? Please explain. Five key challenges for the medical scheme industry were identified:

- Maintaining membership of younger and healthier members;
- Changes in conditions of employment of members, especially restricted schemes;
- Affordability of cover provided to members;
- Sustainability of current funding levels and cost structures; and
- Consolidation of medical schemes.

Market environment

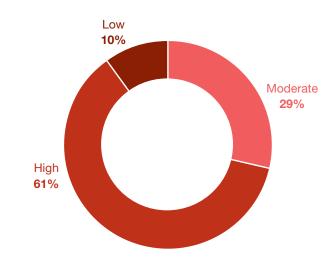

The market environment has undergone significant changes in recent years with the number of schemes reducing drastically, which brought forth advantages as well as disadvantages. One such an advantage as identified by the survey respondents was the greater spread of risk in the risk pools of the schemes.

National Treasury released draft regulations on the demarcation between health insurance policies and medical schemes in March 2012 and this could have a significant impact on the market as the regulations provide an opportunity for insurers to enter the market with innovative products that meet the new requirements.

Q: What is your perception of the level of intensity of mergers and consolidation activity that is likely to take place in the medical scheme market, taking into account that the number of medical schemes has reportedly decreased from 124 in 2006 to 99 in January 2011.

Figure 21: Expected levels of merger and consolidation activity

Base: 21 respondents

Q: What impact did mergers have on the medical scheme industry? Please explain. Responses are summarised in the table below:

Advantages of the mergers

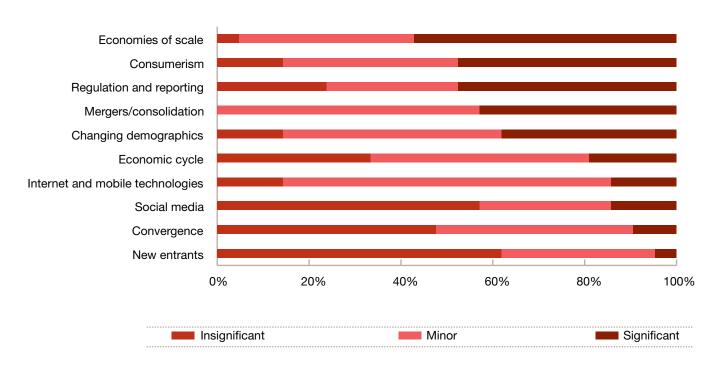

- · Increased cost efficiencies;
- · Reduction of non-healthcare costs;
- Consolidation and greater spread of risk in risk pools;
- Stability and sustainability of schemes;
- Bargaining power in negotiating tariffs with providers and introduction of networks;
- Improved service quality; and
- Bigger market and financial leverage.

Disadvantages of the mergers

- Undesired monopoly;
- Larger schemes become larger; and
- Reduces choice and flexibility for members.

Q: What do you see as the major drivers of change in the industry today?

Figure 22: Major drivers of change

Base: 21 respondents

The major drivers of change identified include:

- Economies of scale;
- · Consumerism;
- Regulation and reporting;
- · Mergers/consolidation; and
- Changing demographics.

Some of the insignificant drivers of change identified include:

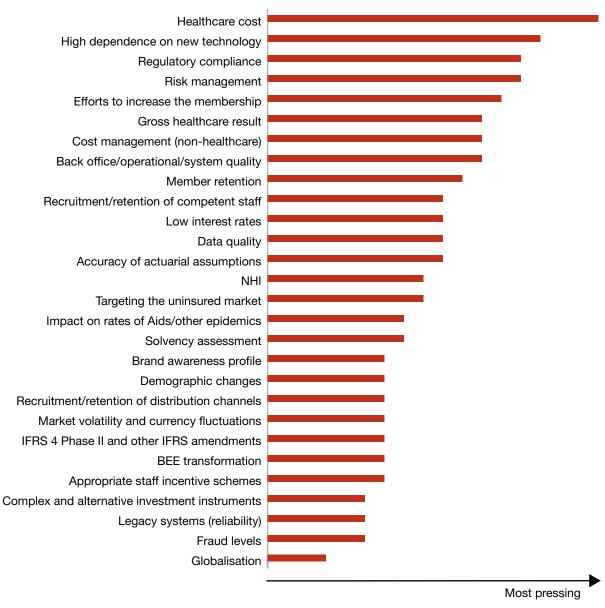

- New entrants;
- · Convergence; and
- · Social media.

The growth of internet and mobile technologies was not identified as a likely major driver of change. This is in contrast to PwC's Health Research Institute Consumer Survey, in which mobile technologies was identified as the driver that holds greatest promise

for keeping people healthy, managing diseases and lowering healthcare costs. Mobile devices can enable health and wellness to be delivered through mass personalisation.

Q: What are the most pressing issues facing your scheme?

Figure 23: The most pressing issues

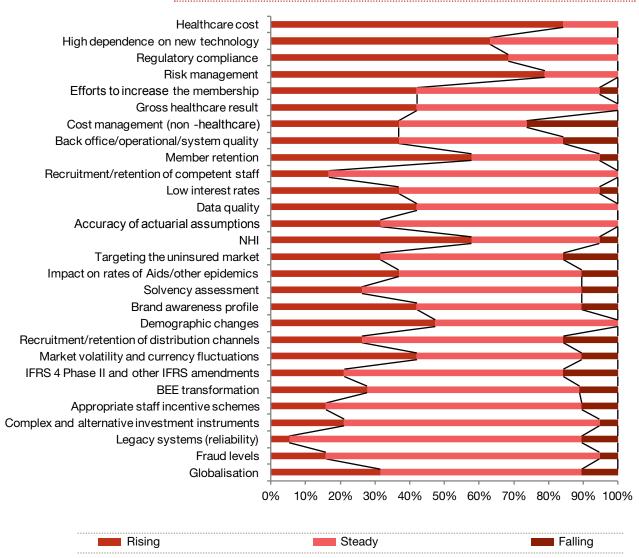

Base: 21 respondents

Schemes were asked to rank 28 pressing issues in severity.

Q: Are your most pressing issues rising, steady or falling in significance?

Figure 24: Trends in issues faced by schemes

Base: 21 respondents

Prominent rising issues	Prominent steady issues	Prominent falling issues
 Prominent rising issues Healthcare cost; Risk management; Regulatory compliance; High dependence on new technology; Member retention; and NHI. 	 Legacy systems (reliability); Fraud levels; Recruitment/retention of competent staff; Complex and alternative investment instruments; Appropriate staff incentive schemes; Accuracy of actuarial assumptions; Solvency assessment; and IFRS 4 Phase II and other IFRS amendments. 	 Cost management (non-healthcare); Recruitment/retention of distribution channels; Targeting the uninsured market; Back office/operational/system quality; Globalisation; BEE transformation; Impact on rates of Aids/other epidemics; Brand awareness profile; and
		,

Information technology

Q: Identify three major technology weaknesses in the medical schemes industry Schemes cited managing data and data quality as one of the major weaknesses within the industry. Good quality data is critical to designing appropriate price plans, managing solvency, estimating outstanding claims liabilities and managing and assessing benefits. Elements of data quality that require attention include managing data through a repository or warehouse and implementing and maintaining data quality processes.

An electronic health record is a systematic collection of electronic health information about individual patients or populations. A record is stored digitally and has the potential to be shared across different health care settings. Electronic health records may include data about the medical history of a patient including immunisation, pathology and radiology test results, and personal information. Exchanging such information must comply with data privacy legislation. Many schemes agree that the existence of an electronic health record would assist with the pricing of options and design of benefits, the assessment of treatment, providing managed care and administering preventative health care.

Member and beneficiary identification at point of service is seen as a challenge and is an area where fraud may occur. Smart cards could provide a solution to record details, including biometric information, to adequately identify a member and maintain an electronic health record.

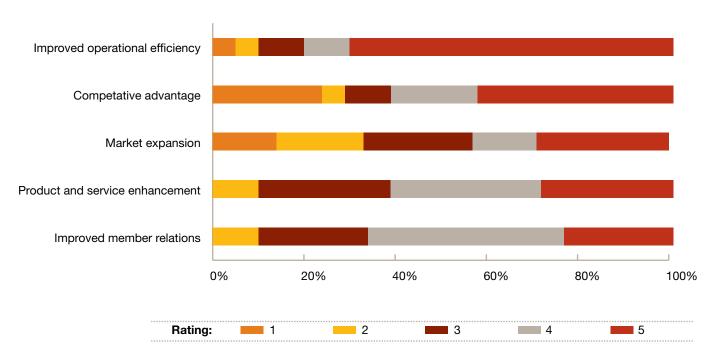

The medical scheme industry is reliant on straight-through processing to meet member service levels. Claims processing capabilities and connectivity with healthcare providers are seen as critical to the success of managing the benefit assessment and approval process. Many schemes feel that these areas will require improvement to meet service-level demands required in the industry.

Claims assessment is complex and systems are often not adequate to deal with clinical rules and provider fraud. Some schemes found the coding of PMBs on the ICD-10 coding system a challenge because it is based on the diagnosis code and not on the treatment applied. This makes it difficult to configure rules to assess the validity of treatments applied for PMBs.

There are, furthermore, a limited number of system service providers to choose from. The cost of technology is seen as a challenge, especially for smaller schemes as system cost is normally fixed and the cost per member may not be viable. Feedback from respondents was inconclusive in respect of the return on investment received from IT spend.

Q: What do you perceive to be the key benefits of your IT investment? Please score on a scale of 1-5, where 1 is of lowest and 5 is of greatest benefit.

Figure 25: Benefits of IT investment

Base: 21 respondents

Most schemes believe that their systems provide a competitive advantage compared to other schemes and administrators. Schemes also believe that their systems assist with improved operational efficiency and product and service enhancement. Some believe that systems can assist with market expansion through flexibility, scale and reach.

Q: Have you considered the role of e-health in reducing costs and improving accessibility?

e-health is a discipline at the intersection of information science, computer science and healthcare.

Almost half the schemes are confident that e-health can improve interactions between members and providers, especially in remote areas where people have mobile devices. However, some have not considered the role that e-health can play in reducing costs and improving accessibility. Social media has been listed as an area to be explored in respect of communication with members.

Regulation

Regulation of the South African medical scheme industry is governed by the Medical Schemes Act and the Regulations thereto.

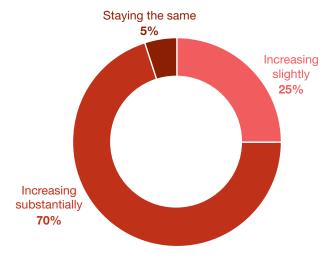

Respondents mentioned the burden of regulatory compliance in virtually every section of the survey. Schemes cite compliance and regulatory requirements as the second-biggest challenge facing the industry, with excessive regulation and regulatory intervention by the CMS cited by many schemes as a weakness in the industry.

Seventy percent of schemes expect the intensity of regulation to increase substantially over the next three years. This is not unexpected given recent developments in respect of Regulation 8 on the payment of PMBs. Circular 38/2011 and 5/2012 have implications for medical savings accounts and the more-recent draft regulations on the demarcation between health insurance policies and medical schemes will also have an impact. In addition, there have been numerous publicised interventions by the CMS in the affairs of schemes over governance issues as well as intervention by the Registrar of Medical Schemes and the Competition Commission in the provider market.

There is also an expectation that the Regulator will continue to monitor and impose new requirements across different parts of their operations. On top of these issues, NHI means that the operating environment has become more complex and unpredictable.

Q: How do you see the intensity of regulation of the medical scheme industry changing over the next three years?

Figure 26: Expected intensity of regulation

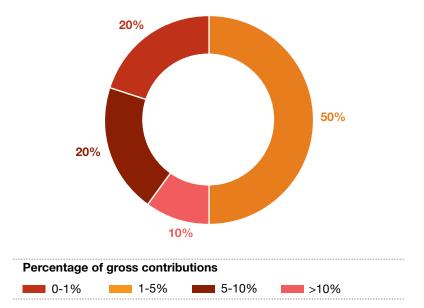

Base: 20 South African respondents

Seventy percent of schemes see the intensity of regulation increasing substantially over the next three years with only one of the view that it would stay the same. None believed it would decrease.

This is likely as a result of the impending Medical Schemes Amendment Bill as well as the increasing scrutiny of schemes by the CMS.

Q: In your view, what is the estimated cost to your scheme of implementation and annual compliance with the regulatory regime expressed as a percentage of gross contributions for the 2011 financial year?

Figure 27: Cost of regulation

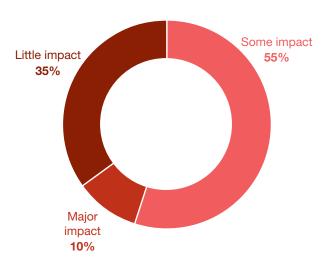

Base: 20 South African respondents

Half of schemes surveyed currently spend 1-5% of their annual gross contributions on compliance. This will increase if the expected increase in intensity of regulation materialises.

Q: Annexure B of the Regulations provides investment limits to which schemes must adhere. What is the impact of the limitation on the investment return that is earned by the scheme?

Figure 28: Impact of investment limits

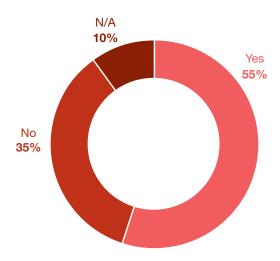

Base: 20 South African respondents

More than a third of schemes see Annexure B as having little impact on the investment returns of the scheme while the rest view this as having some or major impact. Comments received from those who believe there will be little impact, indicate that the limitations suit the industry by enforcing conservative investment policies on the schemes. Those who responded that the limitations had some impact, were generally in favour of the limitations, but noted that the restrictions do result in lower investment returns than would otherwise be possible.

Q: Circular 38 of 2011, issued by the Council for Medical Schemes, requires schemes to remove personal member savings accounts from the financial statements of the scheme. Does the scheme have the system and resources to adhere to these requirements?

Figure 29: Removal of personal member savings accounts from financial statements

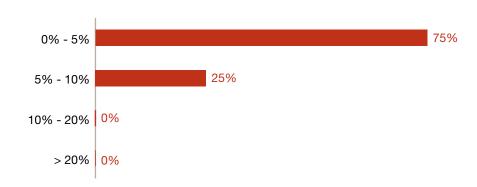

Base: 20 South African respondents

At the time of completing the survey, the industry was split over their readiness to comply with the requirements of Circular 38, with a small majority of the view that they do have the system and resources in place to comply.

Looking at the split between open and restricted schemes, it is evident that the restricted schemes are able to implement the requirements more easily, with only two out of eight responding 'No', whereas for the open schemes, five out of 10 responded 'No'. The other two schemes surveyed do not offer savings accounts.

Q: By what percentage will the current solvency margin of the scheme decrease as a result of the decline in investment income resulting from the requirements of Circular 38?

Figure 30: Decline in solvency margin

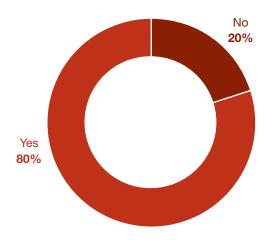

Base: 20 South African respondents

The majority of respondents indicate that the impact of Circular 38 on their solvency will be less than 5%. The impact on solvency is mainly as a result of schemes no longer benefiting from a portion or all of the investment returns earned on member savings balances with the full investment return on these funds being allocated to the members.

Sixteen of the schemes surveyed had members' savings accounts. Of these 12 were of the opinion that the impact on their solvency will be less than 5%, while the other four schemes were of the opinion that it will be less than 10%.

Q: Have you considered the impact of the Consumer Protection Act on your scheme?

Figure 31: Impact of the Consumer Protection Act

Base: 20 South African respondents

Eighty percent of schemes have considered the impact of the Consumer Protection Act on their scheme. A third of those who have considered it, cite changes in communication with members as the leading impact, followed by increased member complaints and challenges, which schemes need to defend, with a consequent increase in expenditure by the schemes.

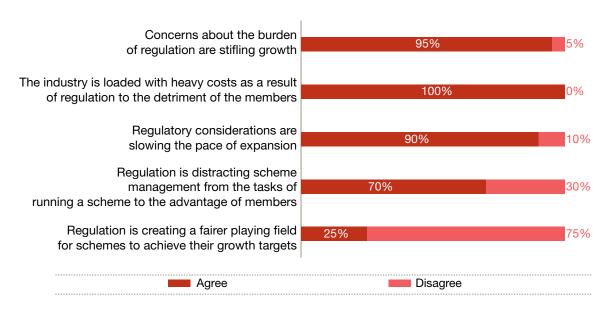

One scheme commented that the Act does not apply to schemes based on the legal evidence they have seen. The schemes who have not yet considered the impact are likely awaiting the outcome of the CMS application for exemption from certain sections of the Act.

Q: What do you consider to be the main impact of the Protection of Personal Information Bill on your scheme? More than a third of schemes commented that they do not see the Protection of Personal Information Bill having a big impact due to the confidentiality requirements in respect of member records that are already in force through existing legislation in the Medical Schemes Act and Regulations thereto.

However, just as many identified the likelihood of increased costs to ensure compliance, through additional monitoring and administration of personal information.

Q: Do you agree or disagree with the following statements about regulation?

Figure 32: Ramifications of regulation

Base: 20 South African respondents

It is evident from Figure 32 and the comments received that medical schemes believe the industry suffers from too much regulation. A number of schemes commented that there is a need for regulation in the industry, but that the extent of regulation and the manner in which it is enforced have led to detrimental consequences for the industry and ultimately the medical scheme members.

One example cited is the interpretation of Regulation 8 requiring payment of PMBs in full. Another is the failure of the CMS to introduce the Risk Equalisation Fund, which would have facilitated a fairer playing field for schemes.

Respondents believe the industry suffers from too much regulation.

Solvency and risk management

The solvency ratio of a scheme is calculated as the accumulated funds (excluding cumulative unrealised gains on investments) divided by gross annual contributions in respect of a particular accounting period. This measure does not allow for any risk transfer arrangements or for the individual risk profile and size of the scheme. It also does not take the asset profile of the scheme into account. Savings contributions are treated in the same way as risk contributions.

Weaknesses in the current manner in which the solvency ratio is calculated were strongly represented by the responses in the survey.

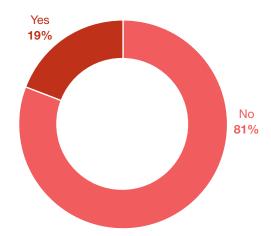

Medical schemes enter into insurance contracts with its members whereby on the occurrence of a health event the member is reimbursed for any loss suffered as a result thereof. Schemes may enter into risk transfer arrangements to transfer some insurance risks to a third party which mitigates the risk accepted under direct healthcare contracts by schemes.

The environment in which medical schemes operate in South Africa is distinct in that schemes cannot fully underwrite risks due to the regulatory enforcement of open enrolment and community rating. The measures schemes use to manage the risk profile of members is to include benefit limits, co-payments, exclusions on preexisting conditions, clinical protocols, case management programmes and managed care programmes.

Due to the number of risks that schemes face, it is important that these risks are identified, monitored and managed. Unlike insurers, medical schemes are not required to calculate risk-based capital, but some schemes see it necessary to measure their risks and perhaps put in place mitigation techniques to reduce this risk.

Q: Do you believe that the current manner in which the solvency margin of a medical scheme is calculated is appropriate?

Figure 33: Appropriateness of solvency margin calculation

Base: 21 respondents

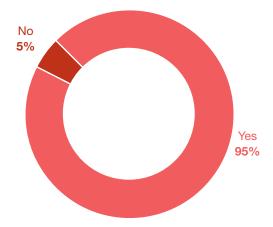

Eighty-one percent of schemes believe that the manner in which the solvency margin is calculated is inappropriate.

The main reasons given for this include the size, individual risk profile and other relevant factors relating to a scheme are not taken into account when the solvency margin is calculated.

The schemes that believe the current manner in which the solvency margin is calculated is appropriate said that this was a good indication of the overall good standing of the scheme.

Q: Would you support a more focused risk-based solvency approach?

Figure 34: Support for a risk-based solvency approach

Base: 21 respondents

The 25% requirement is arbitrary and a risk-based measure should be used as this would provide more appropriate scheme reserves. While a risk-based approach is more complex, it would be a much better indicator of the solvency position of a scheme.

Q: In your view, how difficult will it be to implement each of the following actuarial functions if a more complex solvency assessment model is introduced for the industry?

Figure 35: Difficulty of implementing actuarial functions

Base: 21 respondents

The majority of schemes indicate that most actuarial functions would be very easy or fairly easy to implement if a more complex solvency assessment model is introduced.

A number of schemes indicate that sufficiency and quality of data could be a challenge if a more complex solvency assessment model is introduced. This is expected as a more complex measure will require more detailed data than currently used and may require an upgrade in systems. A possible solution to this would be for schemes to start collecting data that they anticipate will be required if such a model is introduced.

Q: Are you in favour of the IFRS 4 Phase II ('Insurance contracts') proposals for medical scheme contracts?

Sixty-two percent of schemes are not in favour of the new standard being proposed.

The implementation of IFRS 4 ('Insurance Contracts') Phase II is anticipated in 2015 and all schemes will have to comply with the requirements.

IFRS 4 Phase II has been in development for more than a decade and the Exposure Draft was published in August of 2010. According to the Exposure Draft the introduction of

Phase II will illuminate the 'black box' of financial statements and provide all financial statement users and preparers, members, brokers, competitors and regulators with greater comparability and transparency about performance as a direct result of consistent measurement and presentation models.

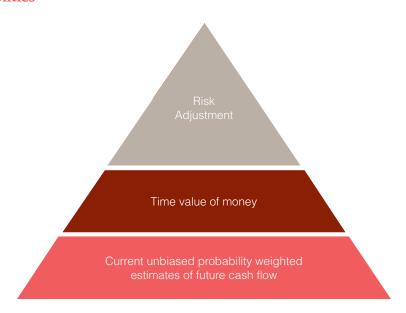

Q: Does your scheme have the capabilities to implement the proposed IFRS 4 Phase II?

The 'building blocks' below set out the measurement approach used to measure the schemes' claims liability.

The main areas of difficulty envisaged relates to measuring the mean cash flows for the claims liability as well as calculating an explicit risk adjustment. Systems, data and technical skill requirements will be challenging, as will assessing and communicating the adequacy of the liability.

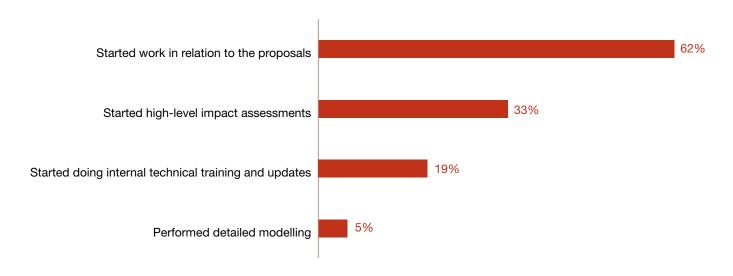

Fifty-seven percent of schemes indicate that they have the capabilities to address the challenge mentioned above. Forty-three percent of schemes will therefore need to improve systems, resources and skills in order to meet the requirements of IFRS 4 Phase II.

Proposed building blocks model for the measurement of claims liabilties

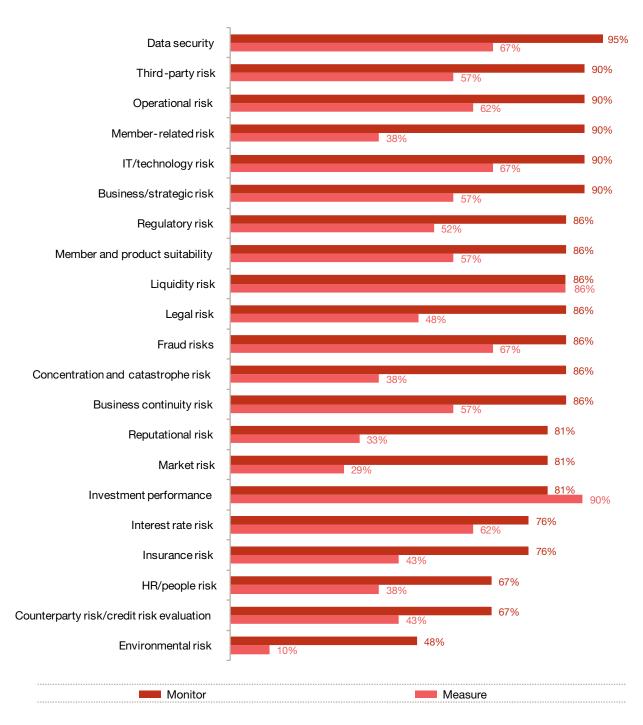

Q: Please indicate if your scheme is doing any of the following activities to prepare for IFRS 4 Phase II?

Figure 36: Preparation for IFRS 4 Phase II

Base: 21 respondents

Figure 37: Processes in place to monitor and measure risk

Base: 21 respondents

Twenty-one types of risks were identified and schemes were asked to record which risks they monitored and to indicate whether they had metrics in place to quantify and measure these risks. Risks were sorted according to the percentage that monitored them. For example, 95% of schemes indicated that they monitored data security risk, making it the most monitored risk. However, only 67% of schemes measured this risk.

While a significant proportion of schemes do monitor the risks identified above, a smaller proportion of them actually measure the risk being monitored.

The top risks monitored by schemes are:

- Data security;
- Third-party risk;
- · Operational risk;
- Member-related risk;
- · IT/technology risk; and
- Business/strategic risk.

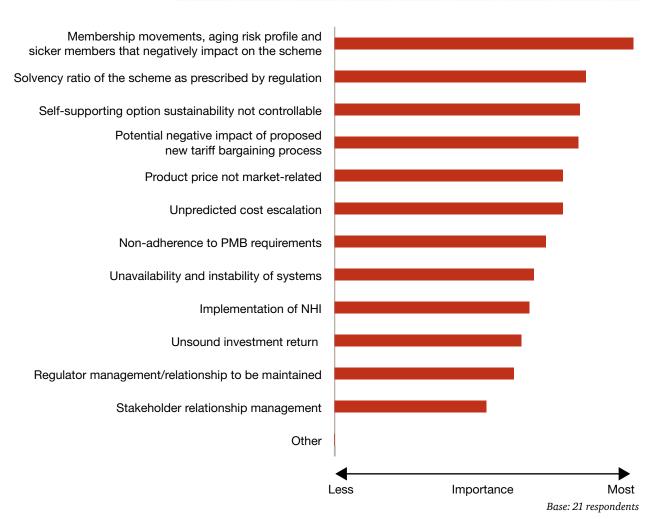

These concerns suggest that data quality is a priority for most schemes. This is because data is imperative to accurate pricing and risk management processes, which both significantly impact the operations and solvency of a scheme.

Schemes' third parties include outsourced service providers. Although risk is transferred to managed care service providers, these organisations do not have any regulatory capital requirements for this risk.

If a scheme has a contract with a service provider for the provision of benefits to its members and the provider is unable to provide these benefits, for example in the case of insolvency, the scheme is still liable for these benefits or services. It is therefore important for schemes to monitor their third-party risk exposure.

Operational risks include fraud and failed internal processes. Responses indicate that most schemes have measures in place to detect fraudulent behaviour.

Figure 38: Medical scheme-related risks

It was found that the top three risks faced by the industry are:

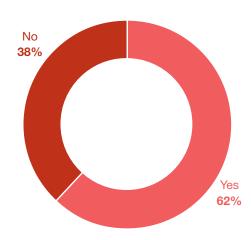

- Membership movements, ageing risk profile and sicker members that negatively impact on the scheme;
- Solvency ratio of the scheme as prescribed by regulation; and
- Self-supporting option sustainability not controllable.

The 'self-supporting option sustainability not controllable' relates to claims exceeding contributions in a particular option.

Some of the reasons for this could be the risk profile of members on an option being different to that assumed when pricing the option. As schemes cannot underwrite and price in accordance with members' individual risk profiles, this could represent a significant risk to schemes.

Q: Has your scheme entered into risk transfer arrangements?

Figure 39: Risk transfer

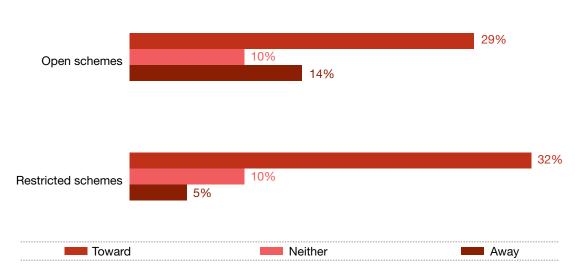

Base: 21 respondents

Currently 13 of the 21 schemes have entered into risk transfer arrangements.

Eight of these are restricted schemes and the remaining five are open schemes.

Q: Do you see a move towards or away from risk transfer agreements as part of your risk management strategy? Please comment.

Figure 40: Risk management strategy

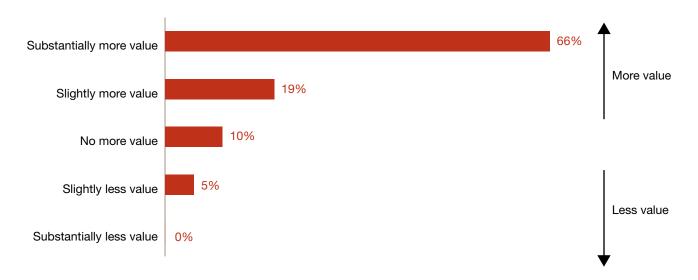

Base: 21 respondents

Approximately half of schemes indicate that a move towards risk transfer arrangements is anticipated. However, some schemes believe there would only be a move towards these arrangements for certain disciplines.

Four of the schemes said that a move away from risk transfer arrangements is likely because the costs of risk transfer arrangements outweighed the benefits. Q: Is your scheme's risk management function adding more value to your business now compared to three years ago?

Figure 41: Value of risk management function

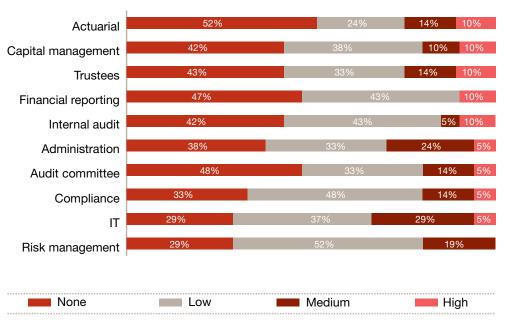

Base: 21 respondents

Since the financial crisis there has been an increasing drive to understand risks in the financial services industry and medical schemes have followed suit. However, the medical schemes environment in South Africa is faced with additional risks because they are not allowed to underwrite. Schemes have therefore turned to alternative techniques to manage the risk profile of members.

The increasing focus on risk management, coupled with technological and skills developments, have enabled schemes to better identify risks and find ways to manage these risks. Incentivising healthy lifestyles, increasing their ability to detect fraudulent behaviour and faster claims processing systems, are a few of the techniques currently being used. Schemes recognise the value this is adding to their risk profiles as well as their overall efficiency.

Q: In which areas are you currently experiencing the greatest shortage of skills?

Figure 42: Skills shortages

Base: 21 respondents

Figure 42 illustrates that there is no particular pressing skills shortage in the medical scheme environment.

Peer review

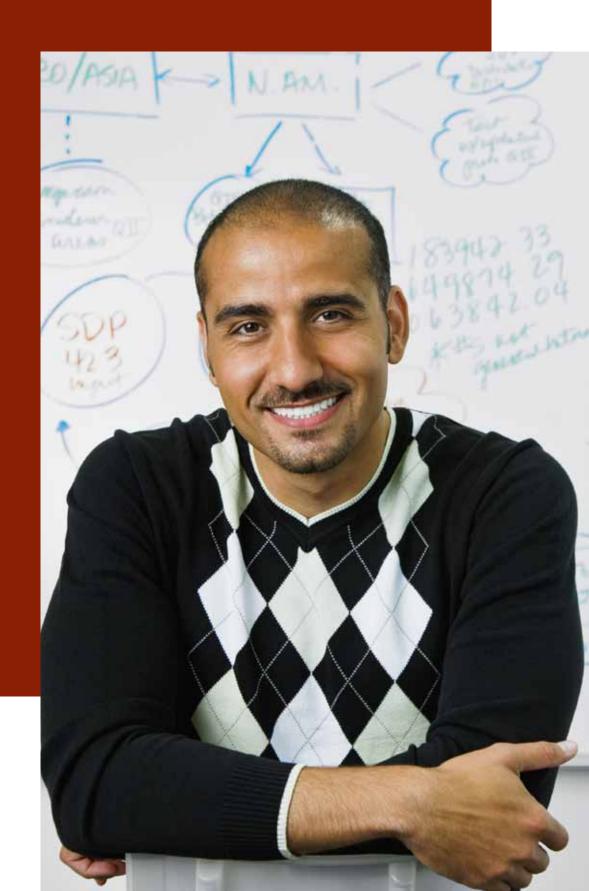

Q: Rank the top five medical schemes in terms of success, market share, service levels, performance, presence and impetus. The 21 schemes that participated in the survey provided a peer assessment of schemes in the industry. A simple scoring method was used and each ranking received one point. This allowed the schemes to be ranked according to a cumulative total score. Respondents were not permitted to rank their own institution. The points received by the schemes have been included in the table below in brackets.

It is recognised that this ranking is a subjective process and that the results are intended to acknowledge perceptions in the marketplace. This is not a quantitative measure of success.

Peer review

Scheme	Ranking (votes received)
Discovery	1 (17)
Bonitas	2 (13)
Fedhealth	3 (10)
GEMS	4 (9)
Momentum	4 (9)
Medihelp	5 (6)

Including managed care healthcare benefits

Including broker services fees and other distribution costs paid

Gen-Health Medical Scheme was liquidated with effect from 12 October 2010. Members were transferred to Medshield Medical Scheme.

Ingwe Health Plan amalgamated with Momentum Health on 1 September 2010.

Liberty Health Medical Scheme changed its name to Liberty Medical Scheme on 1 January 2010.

About PwC

A world-leading professional services firm

PwC is truly a global organisation committed to helping our clients meet the challenges posed by the global economy. We are one of the largest knowledge businesses in the world – a leader in every market in which we operate. Worldwide, we possess an enviable breadth and depth of resources, yet we work locally, bringing appropriate local knowledge and experience to bear – and using the depth of our resources to provide a professional service, specifically tailored to meet our clients' needs.

The service we offer to clients is underpinned by our extensive coverage and breadth of skills. When PwC was formed on 1 July 1998, it immediately became the largest professional services firm ever created. This marked a quantum leap in global professional services, bringing together thousands of people all over the world possessing considerable collective expertise and sharing a single goal of enhancing client value.

Servicing our markets

The objectives of our service offering are to build trust and enhance value for our clients and stakeholders. To meet the requirements of our clients, as well as regulators, our services are grouped into three distinct service lines, namely Assurance, Advisory and Tax.

We continue to operate as a multicompetency organisation offering a range of high-quality services to clients. In our business change is the only constant and we are continually adapting our range of services to ensure our sustainability and that of our clients and stakeholders. As market needs change, so will our service offering.

Assurance

Our Assurance group provides audit assurance to clients through PwC Incorporated on their financial performance and operations, as well as helping them improve their external financial reporting and adapt to new regulatory requirements.

The true value of an audit is not solely in ensuring compliance with exacting rules, regulations and standards. Instead it lies in our focus on substance over form and on progressing toward a reporting and audit model that communicates better information about a company's long-term value and the risks that are being taken to achieve such value.

Our leading-edge audit approach can be tailored to meet the needs of any size organisation, as evidenced by our appointment as auditor to some of the largest organisations as well as to thousands of small and mid-sized businesses. In every case, our service offering is underpinned by our deep industry knowledge, wide international experience, and global network of skilled professionals.

This deep industry knowledge is one of the foundations of our success. Our teams are aligned to the industry groupings in which they have the most expertise, enabling them to deliver tailored solutions to complex issues in these sectors. Our traditional core competency has been augmented over the years by the development of additional services that address our clients' requirements.

Our audit clients include many of the top performing companies on the JSE Securities Exchange SA, as well as many small and mid-sized businesses. In addition to audit, other services provided include accounting and regulatory advice, and attest and attest related services.

Advisory

Advisory provides advice and assistance based on financial, analytical and business process skills to corporations, government bodies and intermediaries in the implementation of strategies relating to:

- Creating/acquiring/financing businesses;
- Integrating them into current operations;
- Enhancing performance;
- Improving management and control;
- · Dealing with crises; and
- Restructuring and realising value.

Offered by trained professionals specialising in their respective fields and industries, we provide advisory services in an objective manner that help our advisory clients create stakeholder value, build trust and communicate with the marketplace.

To best serve our advisory clients and build new businesses, we understand their needs through each stage of what we call the business lifecycle.

To this end, our advisory services are built around four key client priorities: transactions; performance improvement; governance, risk and compliance; and crisis management.

Our competencies span the breadth of these priorities, and we bring them to our clients in a variety of service offerings.

Transactions

Comprehensive services related to financial transactions, including financial due diligence, valuations, financial modelling, negotiating and structuring acquisitions and disposals, raising finance, and developing exit strategies.

Performance Improvement

Services to assist our clients in identifying and implementing cost saving initiatives, and improving management, control and quality.

Risk Advisory Services

Services to assist our clients in measuring and monitoring ongoing governance, sustainability and compliance infrastructures, and the efficiency and effectiveness of financial, non-financial and information technology controls and systems.

Comprehensive services related to business recovery, restructuring, dispute analysis and forensic investigations.

Tax

Taxation is one of the biggest cost items in any business, yet it is one of the most manageable. Using state-of-the-art methodologies and technology, coupled with specialist skills, our national team of advisers can assist clients to manage their tax risk and where possible, minimise their tax burden by providing innovative, often proven, practical tax and business solutions.

Our advice covers all aspects of Southern African direct and indirect taxes, exchange control regulations and employee-related issues. Through our extensive network of offices we are also able to provide advice on structuring international business operations and investments.

Corporate Tax

Corporate Tax provides specialist advice to assist South African corporates to manage taxation costs and cash flows. Our specialists are informed on current regulatory and business developments, and use this knowledge to maximise the return to our clients through corporate tax planning.

Human Resource Services

We have an established human resource practice delivering solutions to the people-related issues encountered by our clients.

By combining our human resource and tax professionals, we are able to offer our clients breadth and depth of expertise in employment tax, reward, equity incentives, personal tax, social security and employment benefit services. Our experts providing expatriate tax services examine all aspects of deploying people globally, from creating non-standard assignment programmes to managing costs through effective tax planning, process improvements and outsourcing. They are supported by highly experienced immigration specialists in South Africa and worldwide, providing advice on the immigration law and various permit categories.

Indirect Tax

Encompassing value-added tax (VAT), customs and excise duties and RSC levies, indirect tax is an increasingly complex area; every transaction in a business is affected. Our Indirect Tax team advises corporate clients on local and cross-border issues, utilising our global expertise and networks. Our clients operate across the full spectrum of industry, and we use our expertise to advise them on the best solution to their local, regional, and international issues, often utilising our global network to bring best practice to our clients.

International Tax Structuring

We provide business solutions to specific, complex client needs that serve to manage global tax risk and, where possible, minimise the global tax burden, taking into account exchange control as appropriate. We work as part of an integrated local and international industry-focused team of business advisers, to provide specialist international tax and exchange control services.

Transfer Pricing

We develop transfer pricing policies that are practical, defensible and consistent with our client's overall business strategy. Our services include transfer pricing risk assessments and full transfer pricing studies. We also provide advice on current and proposed transfer pricing legislation in South Africa and abroad.

Tax Compliance Centre

We provide specialist income tax compliance services to companies, based on global best practice models. The Centre runs state-of-the-art income tax compliance processes, and has a dedicated compliance manager responsible for each outsourcing contract to ensure the timely and efficient delivery of tax returns.

Tailored electronic tax data collection applications and robust risk management and quality control procedures ensure the delivery of high quality tax returns.

Private Company Services

Business leaders regard business as personal. Our past and continued involvement with business leaders gives us a broad understanding of the unique demands and challenges facing private companies today. Our response is simple – to develop professionals who understand these challenges and rise to them. These Trusted Business Advisers (TBAs) work closely with our industry experts to provide tailormade solutions specifically geared to adding value in the private company environment. A TBA acts as a gateway to all the knowledge and expertise of our entire organisation, combined with comprehensive knowledge of local markets and industries. Through our TBAs, clients have access to an integrated service delivery approach encompassing any combination of our firm's services.

Trust and excellence are the foundations of our relationships. We foster those relationships by engaging our clients in conversations around the issues, risks and opportunities of the day, in order to ensure that their businesses continue on the road to sustainable profitability and growth. We also know that life is about more than business. It is also about individuals. We therefore extend our involvement to offering advice on personal finances, taxation, succession, estate and retirement planning. We assist clients with every facet of their business in order to add real value, and help them achieve their business goals and dreams.

A focus on industries

One of the foundations of our success is our ability to adapt our services to meet the needs of our clients. Internationally, teams are aligned to the industry groupings in which they have the most expertise, enabling them to deliver tailored solutions to problems in these sectors.

The depth of our industry expertise, like our international perspective, is an attribute that our clients value highly. We invest significant resources in building and sharing such expertise.

We have organised ourselves around industries to:

- Share the latest research and points of view on emerging industry trends;
- Locate individual experts on each issue, wherever they are based;
- Develop industry-specific performance benchmarks, based on global best practices;
- Share methodologies and approaches in complex areas such as financial instruments and tax provisioning; and
- Collaborate on accounting or technical issues unique to a particular industry, especially when interpretive guidance is needed.

Our clients range from the country's largest and most complex organisations to some of its most innovative entrepreneurs – we are privileged to work with such an unrivalled client base.

We serve many of the leading businesses in every sector on which we focus; those businesses value our rigorous, practical approach, characterised by a detailed understanding of individual client issues and by deep industry knowledge and experience. We have organised ourselves around industries to:

- Share the latest research and points of view on emerging industry trends;
- Locate individual experts on each issue, wherever they are based;
- Develop industry-specific performance benchmarks, based on global best practices;
- Share methodologies and approaches in complex areas such as financial instruments and tax provisioning; and
- Collaborate on accounting or technical issues unique to a particular industry, especially when interpretive guidance is needed.

Our industry groups are:

- · Financial Services;
- Consumer and Industrial Products and Services (CIPS);
- Technology, InfoComm, Entertainment and Media (TICE);
- Mining;
- · Public Sector;
- Health Care;
- · Higher Education; and
- Agribusiness.

Financial Services

The financial services industry landscape is continually changing and increasing in complexity, causing firms to face a diverse array of challenges and concerns. Corporate governance, risk management and regulatory issues continue to impact the industry. Firms have expanded international operations around the globe to tap into new markets as a source of growth, increase their competitiveness, satisfy demand and better leverage their expertise. To assist our clients, our professionals have in-depth knowledge of the issues driving change in the various sectors of the financial services industry.

This knowledge, combined with our specialised skills, enables us to design and implement cost-effective multidisciplinary solutions to meet the challenges and opportunities facing our clients.

We act as auditors to more financial services companies in South Africa than any other professional services firm.
